Project Overview

Plantscape is a premiere landscaping company, providing complete commercial landscaping services and holiday decorating in the Pittsburgh area. They have two locations and have engaged The Efficiency Network (TEN) to help them with efficiency improvements, including a comprehensive lighting review and upgrade.

TEN is working closely with Direct Energy Business, who introduced their Efficiency Edge program. This program allows customers like Plantscape to implement cost reduction strategies (in this case a lighting upgrade) through their existing utility spend.

In exchange for an electricity supply agreement, Direct Energy Business funded the entire cost of the project through the reduced electricity consumption the upgrade afforded Plantscape with.

The benefits that Plantscape will recognize include expected savings of almost \$20,000 per year, reduced maintenance costs, and improved lighting quality.

Plantscape helps companies “green up” their workplace. TEN and Direct Energy Business were able to help Plantscape take another “green”, sustainable step at their headquarters with this lighting upgrade.
